Running Insight Trader version 18 Presentations

*Microsoft **Producer** for Power Point multimedia presentations*

System Requirements

- Windows 98, ME, 2000, NT 4.0, XP, Vista, Windows 7, Windows 8.
- Microsoft Windows Media Player 6.4 or later. Windows Media Player 9 Series (or later) is recommended to optimize presentation playback.
- Microsoft Internet Explorer 5-8* or Netscape Navigator 7.0 (or later).
- If you do not have Microsoft Power Point installed on your computer, when you try to run the presentation your computer will automatically attempt to access the internet to download the Microsoft Office runtime file **msorun.exe** from the Microsoft site. Download and install this file according to the Microsoft screen prompts
- The higher the resolution that you set your monitor to the better but use at least 1024x768 for best results.

Installation

- Download and run the two presentation installation files by clicking the links below:

http://insighttrader.com.au/downloads/xPresentationIT240514A.exe

http://insighttrader.com.au/downloads/xPresentationIT240514B.exe

- Click the **Unzip** button after you have made any desired changes to the default install folder **C:\ITPresentations** that is displayed. On completion click OK and then OK.

To Play

* **IMPORTANT NOTICE**   If you have *Microsoft **Internet Explorer 9*** or higher installed then these *Microsoft **Producer for Powerpoint*** presentations are no longer compatible and will not run as Microsoft have not yet provided a fix to allow their two software packages to work together. However, in this case *Core Services **IE Tester*** (free download) can be installed where it will simulate Internet Explorer 8 and we have found that the presentations will then run satisfactorily.

Please note that *Core Services **IE Tester*** is a third party product not produced by either Microsoft or Insight Trading Pty Ltd and we therefore have no control over its development or its distribution. If you choose to install this utility you do so at your own risk. Neither Insight Trading Pty Ltd nor Bernard Chapman will be liable for any loss or damages of any kind whatsoever arising out of or in connection with or incidental to the use of *Core Services **IE Tester.***

If you accept the foregoing conditions then click on the following link:

http://www.insighttrader.com.au/downloads/install-ietester-v0.5.2.exe

run this file, and select your install preferences, ie. Desktop Shortcut and Language. Then choose the destination path and install the utility. You may later be informed that there is a later version of this software but DO NOT UPGRADE it when offered as the later versions will not work. (If you have already installed a later version of IETester you should uninstall it before installing the 0.5.2 version above)

Find the IE Tester Icon on the desktop and double click it. Then click on *Home* from the menu and then the *All IE Versions* button and untick all boxes except 8. Exit the utility.

Double click the "IT Presentns What's New .." Icon on the desktop and click Play and the first presentation should now begin. After watching this you can close and click on the second icon on your desktop "IT Presentns Using Velocity" to begin watching the second presentation.

- These presentations use Windows Media Player as well as a web browser - either Internet Explorer or Netscape Navigator. If your browser is displaying superfluous panes or toolbars you can remove them to allow more room on the screen for the presentation components. We also suggest you maximize the browser window. Pressing the **F11** key in IE will toggle an increased display area. With IETester you can expand the display area by clicking "Minimize the ribbon" from the main menu.
- You may receive a number of security notices as the operating system is asking you to verify that the files being run are from a reputable source. You may need to click in the top bar when this is indicated.
- Click the **Play** link to commence. When the main Windows Media Player window appears, if the presentation does not commence playing within a reasonable time, click the **Start** button on the Navigation Control.
- On your monitor there will be displayed three regions. The first is on the top left and is known as the **Video** screen - used in this presentation set for displaying photo stills. Directly underneath is the **Navigation Control** that allows you to **Start/Pause, Previous, Next, Rewind, Fast forward** as well as control **Volume**. Underneath is the **Table of Contents** (TOC) - a list of titles for Power Point slides/screen shots that you can scroll and select. These are synchronized with the audio that is played back through speakers or headphones. The main Power Point slides and screen shots themselves are presented in the large **Slide** area to the right.
- At any time, whether a presentation is in the process of being played or not, clicking on any item in the TOC list will force the presentation to revert to that position. It is very easy therefore to locate specific points in the presentation that you may wish to jump to immediately or to repeat one or more times. Simply click the appropriate item on the TOC list. To stop the playing of a presentation at any time just click the Pause button.
